

Sustainability Assessment Report

Overall Strategy Confidence Score: 96.0/100.0

1. Executive Summary

This Manufacturing sustainability assessment prioritises measures that cut the main emissions hotspot while staying within the INR sustainability budget and the stated reduction timeline.

2. Carbon Footprint Analysis

Annual greenhouse gas footprint for this Manufacturing profile is estimated from operational resource use. Hotspot-focused interventions are recommended first.

3. Recommended Sustainability Measures

Measure Title	SDG Alignment
Rooftop Solar PV Installation (Expected 25.0% reduction)	SDG 12, SDG 13
VFD Installation on Motors (Expected 15.0% reduction)	SDG 12, SDG 13
Waste Heat Recovery System (Expected 12.0% reduction)	SDG 12, SDG 13

4. Financial Analysis & Payback Schedule

Total required capital spending is ■16,00,000, yielding annual savings of ■4,00,000 with an average ROI of 25% and payback period of 4.0 years (all figures in INR).

5. Phased Implementation Roadmap

Phased implementation for the Manufacturing roadmap starts with near-term quick wins, then medium measures, then the highest-impact capital project.

6. Immediate Strategic Next Steps

- Request INR vendor quotes for the top recommended measures.
- Align procurement with the selected priority and timeline.
- Track monthly emissions against the reduction goal.
